CONDITIONS OF ACCEPTABILITY:

The following items are to be considered when evaluating the transformer in end-use product.

1. An enclosure must be provided to provide mechanical protection for the transformer and to prevent user contact with un-insulated live parts.
2. Each transformer employs a Class 105 (A) insulation system.
3. The acceptability of the mounting means shall be determined in the final application.
4. Insulation is provided between the primary and secondary windings based on a maximum working voltage of 600 V maximum.
5. All components covered under this Report may be provided with thermal or over current protections, such as Fuses mounted in Fuse Holders or Thermal Cutoffs. Suitability of these protections should be evaluated in the end use application.
6. The acceptability of the length, routing, and AWG wire size of primary and secondary leads shall be determined in the final application.
7. These transformers were submitted and tested for a maximum manufacturer's recommended ambient (T_{mra}) of 40°C.
8. All models designated with MEXX have interconnection between Primary and Secondary. There is no insulation between Primary and Secondary.

DESCRIPTION

PRODUCT COVERED:

USR, CNR Component transformers, construction only, Series MXX and MEXX followed by digits. Suffix "XX" may be replaced by any letters.

New models MEXX

Constructed with 2 flange bobbin.

Specifications

Input: Max 600 V, and multiple tapplings; 50/60 Hz, single phase.

Output: Up to four outputs with max 600 V total, multiple tapplings are possible. Max power is 1600 VA.

NOMENCLATURE:

<u>MXX</u>	<u>aaaa</u>	<u>bb</u>	<u>b'b'</u>
I	II	III	IV

Example:	<u>MXX</u>	<u>0250</u>	<u>240</u>	<u>-415</u>
	I	II	III	IV

I - Series designation
 II - Power in VA (max 1600)
 III - Primary winding tap voltage
 IV - Primary winding voltage rating

"XX" may be replaced by any letter for customer designation.

"E" stands for autotransformer

ENGINEERING CONSIDERATIONS (NOT FOR FIELD REPRESENTATIVE'S USE):

Use - The transformers covered by this Report are intended for use in end-product equipment where the suitability of the combination is to be determined by Underwriters Laboratories Inc.

USR - Indicates investigation to the UL Standard for Low Voltage Transformers - Part 1: General Requirements UL5085-1 First Edition dated April 17, 2006 including revisions through and including June 1, 2007 and Standard for Low Voltage Transformers - Part 2: General Purpose Transformers UL5085-2 First Edition. Dated April 17, 2006 including revisions through and including June 1, 2007. Product is UL Recognized.

CNR - Indicates investigation to the Canadian Standard Low voltage Transformers - Part 1: General Requirements CAN/CSA C22.2 No. 66-1-06 First edition including revisions through and including June 1, 2007 and to the Canadian Standard Low Voltage Transformers - Part 2: General Purpose Transformers CAN/CSA C22.2 No. 66-2-06 First Edition. Dated April 17, 2006 including revisions through and including June 1, 2007. Product is C-UL Recognized.

Conditions of Acceptability - The following items are to be considered when evaluating the transformer in end-use product.

1. An enclosure must be provided to provide mechanical protection for the transformer and to prevent user contact with uninsulated live parts.

2. Each transformer employs a Class 105 (A) insulation system.

* 3. The Models in the Report comply with the construction requirement of **UL Standard for Low Voltage Transformers - Part 1: General Requirements UL5085-1 First Edition dated April 17, 2006 including revisions through and including June 1, 2007 and Standard for Low Voltage Transformers - Part 2: General Purpose Transformers UL5085-2 First Edition. Dated April 17, 2006 including revisions through and including June 1, 2007 and to the Canadian Standard Low voltage Transformers - Part 1: General Requirements CAN/CSA C22.2 No. 66-1-06 First edition including revisions through and including June 1, 2007 and to the Canadian Standard Low Voltage Transformers - Part 2: General Purpose Transformers CAN/CSA C22.2 No. 66-2-06 First Edition. Dated April 17, 2006 including revisions through and including June 1, 2007.** The dielectric tests were performed to verify isolation. Since the transformers were evaluated for construction only, all performance tests should be conducted in the end-use product.

4. The acceptability of the mounting means shall be determined in the final application.

5. Insulation is provided between the primary and secondary windings based on a maximum working voltage of 600 V maximum.

6. The acceptability of the length, routing, and AWG wire size of primary and secondary leads shall be determined in the final application.

7. The suitability of the Input and Output connection means shall be determined in the end-use application.

8. All models designated with MEXX have interconnection between Primary and Secondary. There is no insulation between Primary and Secondary.
